# Your Energy Bills Are Hiding Waste You Can't See Yet

Most organisations overpay on energy by 20–35% simply because they can't see where, when or why it's being consumed.

## No Visibility

You receive a monthly electricity bill — but you can't tell which floor, system or equipment consumed the most.

Where did it go?

## Peak Demand Charges

Grid tariffs penalise peak demand. Without load management, you pay 20–40% excess in demand charges alone.

Extra on demand tariff

## Equipment Running Blind

HVAC, DG, chillers running beyond schedule or at wrong set points — wasting energy with no one noticing.

Systems run unchecked

## Compliance Gaps

BEE star rating, ECBC 2017, LEED and GRIHA require metered energy data — but it's stored in disconnected spreadsheets.

Multi-ready data today

**Nova EMS gives you complete visibility — and the tools to act on it.**

# Monitor. Analyse. Optimise. Report.

Nova EMS is installed once — and then answers four critical questions your organisation needs answered every day.

## How much energy was consumed?

Monthly totals per meter, per system, per facility — EB, DG, BTU, Water, Gas, Solar.

## Where was the most consumption?

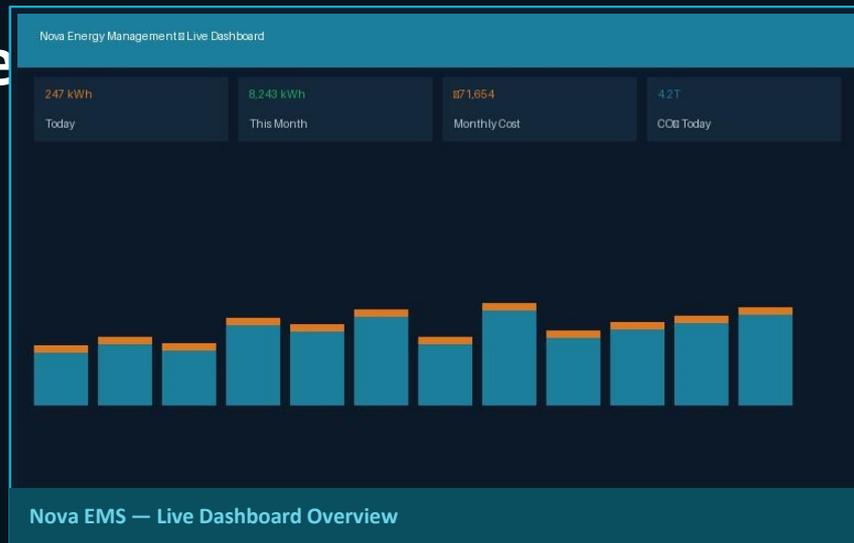

Floor-level, system-level, zone-level breakdown — instantly identifies high consumers.

## When did peak consumption occur?

Hourly interval data reveals demand patterns — enabling load management and scheduling.

## How good is the energy quality?

Track power factor, voltage sags, demand spikes, harmonic distortion across all devices.

## Energy Sources Monitored

Electricity (EB)

Diesel (DG)

Thermal (BTU)

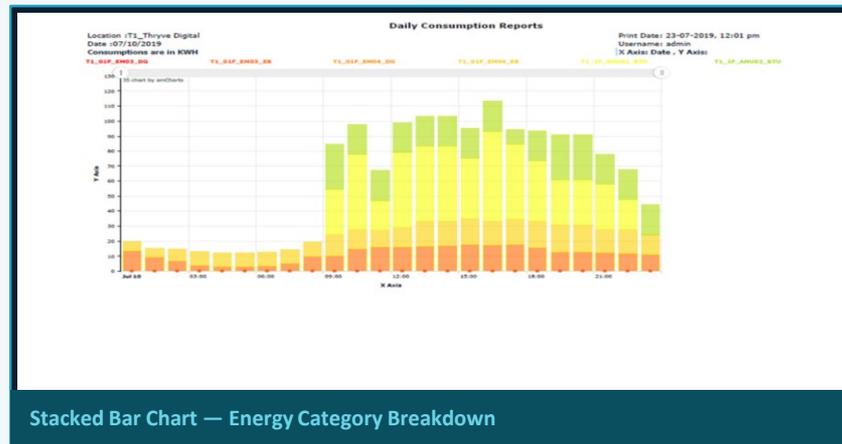

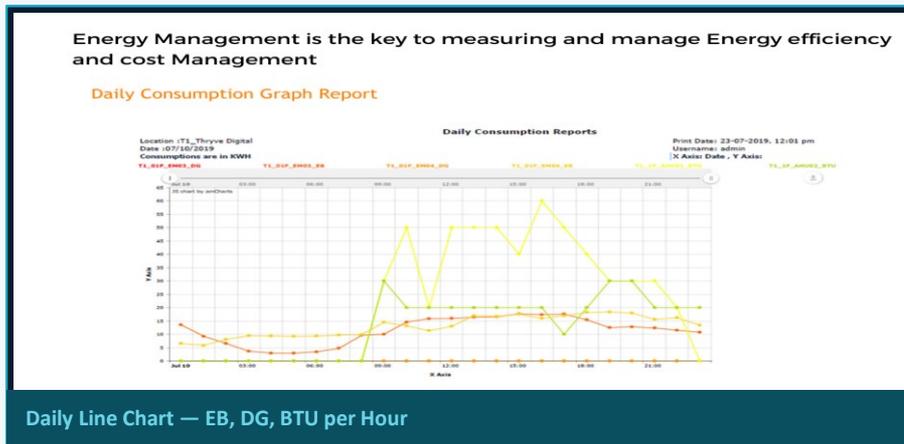

Water

Gas

Solar

## LIVE SCREEN — DAILY CONSUMPTION GRAPH REPORTS

## Hourly Energy Data. Every Meter. Every Day.

## Identify Peak Hours

See exactly when energy spikes — 9AM–12PM typical peak. Shift loads to off-peak for lower tariff.

## Spot Overnight Waste

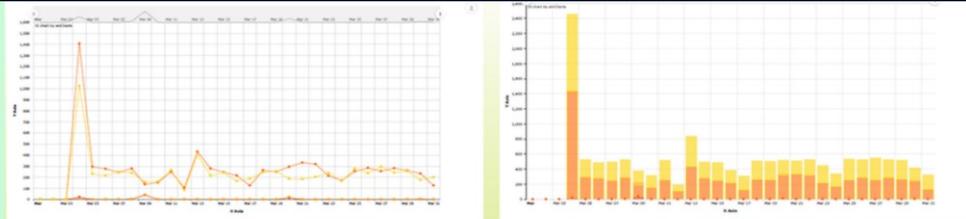

Equipment running after hours? Night-time baseline too high? Nova flags it automatically.

## Multi-Meter Comparison

Compare EB, DG, BTU side by side — identify which source drives each peak and when.

## LIVE SCREEN — MONTHLY CONSUMPTION REPORTS

# Month-on-Month Trends. One Click. Printable. Audit-Ready.

LIVE DATA — LIB Monthly Report · EB + DG + BTU Meters · June 2019

## What the Report Shows

### 6 Meters Tracked

EM03 DG · EM03 EB · EM04 DG · EM04 EB · AHU01 BTU · AHU02 BTU — all on one report

### Daily Granularity

Every single day in June logged — from 01-06 to 30-06, no gaps, no manual entry

### Totals Computed Instantly

EB sum: 8,243 kWh · DG: 8,628 kWh · BTU: 94,668 + 134,408 units — auto-calculated

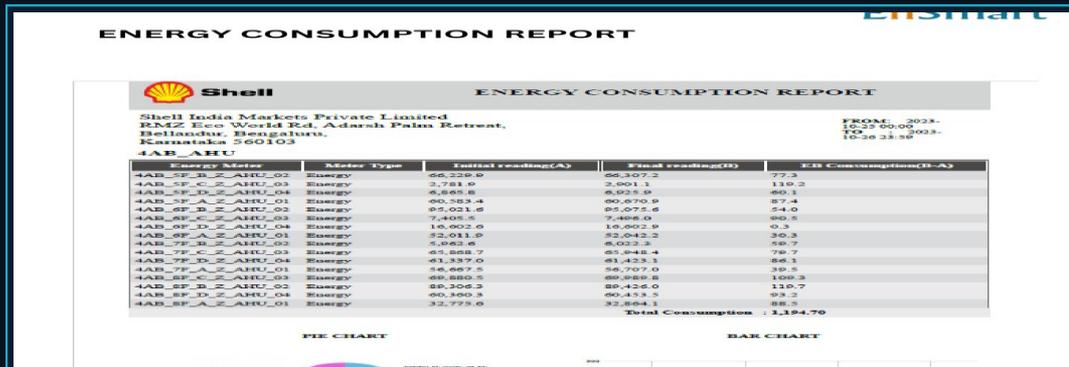

### Audit-Ready Format

Date, username, location header — print directly for BEE

Deploy once. Reports generate themselves — forever.

LIVE CLIENT REPORT — SHELL INDIA · 4AB BUILDING · AHU ENERGY CONSUMPTION

# Per-Floor, Per-Zone, Per-System. Every kWh Attributed.

Shell India — AHU Energy Consumption Report · Oct 2023

Floor-wise Pie Chart + Bar Chart

## Floor-wise Breakdown

8th Floor  
438 kWh  
**34.4%**

5th Floor  
343 kWh  
**28.8%**

7th Floor  
264 kWh  
**22.2%**

6th Floor  
175 kWh  
**14.7%**

Total: 1,194.70 kWh consumed · Automated report, zero manual work.

# Everything You Need to Take Control of Energy

## Web-Based Portal

Operator & Admin access via LAN or VPN — any browser, any device, no software install

## Threshold Alarm System

Configurable alerts via email — consumption spikes, communication failures, limits

## Multi-Energy Monitoring

EB, DG, BTU, Water, Gas — single facility or multiple sites from one dashboard

## 5+ Year Auto Archive

Automatic database backup and archiving — all historical data always accessible

## Advanced Sub-Metering

Floor, zone and system-level metering — pinpoint consumption to any cost centre

## Scheduled Report Delivery

Daily, monthly reports auto-emailed to management, BEE auditors or tenants

## Peak Load Management

Auto-detect demand peaks, shift loads, reduce demand tariff charges by 15–25%

## API Integration

Open HTTPS/API for ERP, BMS and third-party system connectivity

## Demand Tariff Calculation

Multi-slab tariff engine handles domestic, industrial and commercial rate structures

## Multi-Facility Support

Manage hotels, hospitals, IT parks, malls and industrial facilities — one login

# Nova EMS Works Everywhere Energy Is Used

Deployed across commercial buildings, IT parks, pharma, hospitals, retail, industrial and multi-site portfolios.

## IT Parks & SEZs

Per-floor metering · LEED reporting · Per-tenant billing

## Commercial Buildings

Common area charges · BEE star data · Multi-tenant billing

## Pharma / Healthcare

Sterile zone monitoring · 21 CFR logs · GxP compliance

## Retail & Malls

Per-store energy billing · Food court HVAC · Peak alerts

## Industrial Plants

Shift-based monitoring · Machine-level sub-metering · DG log

## Hotels & Hospitals

Room-level HVAC · Kitchen & laundry · Emergency DG tracking

200+ projects across India · All sectors · Running on SmartNova Platform

# The Business Case for Nova EMS

**20–35%**

## Energy Cost Reduction

Typical saving after sub-metering, load management and peak demand control deployment

**15–25%**

## Demand Tariff Savings

Shifting loads away from peak hours reduces demand charge component significantly

**BEE Audit-Ready**

## BEE Audit-Ready Data

All metered energy data in BEE-required format — audit-ready export at the click of a button

**LEED v4**

## Green Building Points

Nova EMS feeds energy data directly into LEED v4, GRIHA and ISO 50001 compliance reports

**<2 Hrs**

## Monthly Report Time

What used to take 2 days of spreadsheet work now runs automatically — zero manual effort

**Real-Time**

## Decision Intelligence

Management sees live data on mobile or browser — informed decisions 24x7, not just month-end

# Your Energy Bill Is Telling You Something.

*Install Nova EMS once — and it will tell you exactly what.*

## Request a Live Demo

See Nova EMS live on your building type — real data, real savings calculation

## Free Energy Assessment

Submit your facility details — we show ROI potential within 48 hours
